University , Bangladesh

Date Of Submission : 12.06.2019

Class diagram with address class and make aggregations on customer and address class:

Class diagrams are widely used to describe the types of objects in a system and their relationships. Class diagrams model class structure and contents using design elements such as classes, packages and objects. Class diagrams describe three different perspectives when designing a system, conceptual, specification, and implementation. These

perspectives become evident as the diagram is created and help solidify the design.
